CUSTOM EAR PLUGS

Hearing Loss is very gradual and you may not realise you have a problem until family or friends comment about it.

Once damage has occurred to your hearing, you cannot regain that hearing back. Hearing loss is very real and very permanent. Hearing aids can help aid the damage but will never return your hearing back to "normal"

In our society hearing loss is occurring in younger ages, due to the noise exposure through work, car stereos, personal stereos, and loud music in general.

Noise/Solid Hearing Protection

These plugs are suitable and recommended for workers or people who are exposed to constant high levels of noise. The plugs will block out a maximum of 40dB. To achieve the highest level of protection, a combination of the custom noise plugs and earmuffs are recommended.

Musicians Earplugs

The plugs are designed for musicians, sound engineers, bar staff etc. Music plugs have a filter that reduces background noise but still allows speech and music to be heard. The filters are available in a 10dB, 15dB and 25dB filter. Basically the idea of the plugs is that sound heard with the filtered ear plugs, has the same quality of sound as the original, just quieter and without losing any important music or speech cues.

Ears and Hearing

Hearing loss is not an age related problem anymore. Hearing loss and hearing damage can occur to anyone no matter the age. Unfortunately once our hearing is lost, it cannot repair itself, even by means of medications or surgery.

Today more than ever, we are exposed to a variety sounds, some harmful. We cannot hide from noise, it's everywhere. But we can protect our hearing.

At **ALL EARS IN HEARING** we have custom hearing protection for everyone, every use and every occasion!

All earplugs are custom made to your ears and come with a protective carry case. Earplugs are available in a wide variety of colors including glitter or sparkles.

Sleeping Plugs

For those who have trouble sleeping, custom sleeping plugs are available. The plugs will reduce up to 30dB of noise. The plugs are a lot more comfortable and streamline than the solid noise plugs.

Swimmers Earplugs

Not all plugs are designed to reduce or block out noise. Swim plugs are available to prevent water entering the ear canal. Ideal for people with grommets or middle ear infections. Swim plugs are suitable for both adults and children

Communication Earpiece

These plugs are specially designed to be used in conjunction with earphones such as MP3 players, Ipods and hands free mobile phone kits...
